ALL IRWIN Expansive

ALL IRWIN Models and

Bits — Many Models and

Prices to Choose From.

ABOVE: The IRWIN HI-LITE No. I

ABOVE: The BLUWIN HI-LITE No. II

IRWIN also manufactures many other brands of Expansive Bits—the most popular are the regular IRWIN HI-LITE No. I and No. 2 and the BLUWIN No. II and No. 12. Both are solid one-piece in construction, sturdy and accurate boring. Your hardware dealer carries them in stock or can get them for you.

NEW MICROMETER DIAL CONSTRUCTION GIVES YOU PRECISION BORING TO THE 1/1000 OF AN INCH --- DIAL THE SIZE HOLE YOU WANT AND GET IT!

DIRECTIONS FOR SETTING

Loosen screw adjustment on back of bit with screw driver.

Dial the size hale you want to bore, lining up the mark on the dial with the size on bit.

Tighten screw adjustment on back securely and bit is ready for boring. The MICRO-DIAL HI-LITE is made in two sizes—the small size, bores any size hole from 5/8" to 13/4"—the large size, from 7/8" to 3". You get a complete boring range that will meet most all requirements at the turn of a dial. MICRO-DIAL's new, micrometer adjustment and one-piece construction gives you a precision tool that bores accurately and true all the way thru. Another exclusive MICRO-DIAL feature is the DEPTH GAUGE on the back that shows at a glance, how deep the hole is, while boring. You will find the MICRO-DIAL mighty handy in your workshop or around the house. Carpenters and other users of wood-boring tools who demand the utmost in speed and accuracy on the job, will appreciate MICRO-DIAL's broad utility value.

Own an IRWIN MICRO-DIAL Expansive Bit and enjoy "a set of bits in one" at a minimum of expense. See your hardware dealer today.
